Improving Lives Since 1976.

# Psychiatric Services

## Program Overview

Our psychiatrists and advance practice nurses will assess your child to determine if medication may be an appropriate part of their overall treatment for conditions including:

- Attention-Deficit/Hyperactivity Disorder (AD/HD)
- Depression and bipolar disorders
- Anxiety
- Trauma and stressor-related disorders
- Psychotic disorders

Initial appointments for psychiatry typically begin with an evaluation which can last from 60 to 90 minutes. If medication is prescribed, our prescribers will work with parents and children regarding expectations and follow-up appointments.

Medication is only one facet of the recommended treatment protocol for many presenting conditions. Therapy, case management, and other adjunct services are usually included for best results.

**Child and Adolescent Behavioral Health (C&A) is pleased to offer psychiatric services to our clients up to age 18.**

## Staff

Our focus is on treating the whole child and improving each domain that touches their life and environment (school, family, social relationships, spirituality).

Our psychiatric team consists of a board certified child and adolescent psychiatrist (medical doctor) and three psychiatric mental health advance practice registered nurses (PMH-APRN's), a registered nurse certified in psychiatric mental health nursing and a medical scheduler.

## New Programming

C&A recently added Just In Time scheduling. This program allows clients to schedule a follow up appointment in a timely manner, allowing for more flexible and client friendly access to services.

## Additional Services:

C&A also provides services to children and adolescents diagnosed with Autism spectrum and FASD (Fetal Alcohol Spectrum Disorder).
